

NEXT GENERATION IMAGING TECHNOLOGY

Industry Leader

BioView's next generation imaging bring exceptional image resolution with increased scan throughput

FEATURES

High Resolution Camera

Extremely high resolution 24.5 MP new generation CMOS sensor

Advanced Software Version

Innovative high-speed focus and Z stack algorithms

New optical configuration

The latest line of objectives introduces a larger numerical aperture (NA), better image flatness and a wider range of chromatic correction

A LEAP IN IMAGING

In its continuous effort to improve automated cell imaging and analysis solutions, BioView is proud to introduce the next-generation imaging technology. Highly sensitive camera sensor with an enlarged pixel array and high-quantum efficiency across the spectrum, combined with precise matching of new line of objectives and new software version guarantees crisp, clear and distortion-free images captured at high speeds.
